

CITY OF SANTA BARBARA

COUNCIL AGENDA REPORT

AGENDA DATE: January 29, 2013

TO: Mayor and Councilmembers

FROM: Creeks Division, Parks and Recreation Department

SUBJECT: Resolution Authorizing Execution Of Grant Agreement In The Amount Of \$300,000 With The State Coastal Conservancy For Construction Of The Mission Creek Fish Passage Project – Lower Caltrans Channel

RECOMMENDATION:

That Council adopt, by reading of title only, A Resolution of the Council of the City of Santa Barbara Authorizing the Parks and Recreation Director, or Designee, to Negotiate and Execute an Agreement and any Amendments for a Grant in the Amount of \$300,000 from the State Coastal Conservancy for the Mission Creek Fish Passage Project – Lower Caltrans Channel.

DISCUSSION:

Mission Creek provides the best opportunity for steelhead trout restoration in the City of Santa Barbara. Mission Creek contains high quality spawning and rearing habitat within the stream channels in the mid and upper watershed. Currently, rainbow trout (freshwater version of steelhead trout) live in the upper stream channel and historically, Mission Creek supported a healthy steelhead trout population. Over the last ten years, there have been frequent sightings of steelhead trout attempting to migrate upstream without success due to barriers within the stream channel.

The large concrete flood control channels along Mission Creek, known as the “CalTrans Channels”, are significant barriers to upstream steelhead trout migration. Removing these barriers will help provide access for steelhead trout to 3.9 miles of creek channel, which include two miles of moderate to high quality spawning and rearing habitat. Phase I of the construction, which included fish passage modifications to the upper (0.3 mile long) channel, was completed in July 2012. Phase II will involve fish passage modifications to the lower (0.8 mile long) channel. Pending available funds, Phase II will be constructed during the summer of 2013.

Council Agenda Report

Resolution Authorizing Execution Of Grant Agreement In The Amount Of \$300,000 With The State Coastal Conservancy For Construction Of The Mission Creek Fish Passage Project – Lower Caltrans Channel

January 29, 2013

Page 2

Because Mission Creek is naturally a seasonal creek, the ability of fish to swim through the constructed passage will be limited to periods of time during rainfall and for short periods of time after the cessation of rainfall when there is sufficient flow in the creek.

Over the last six years, the Creeks Division has worked with the California Department of Fish and Game (CDFG), National Oceanic and Atmospheric Administration (NOAA), Santa Barbara County Flood Control District, Environmental Defense Center, and community members to remove barriers to endangered steelhead trout migration and restore riparian habitat in Mission Creek. The Creeks Division is now reaching out to new partners such as the State Coastal Conservancy in order to successfully complete the important fish passage restoration work on Mission Creek.

The Creeks Division has been awarded a \$300,000 grant from the State Coastal Conservancy for Phase II construction. In order to execute the grant agreement and receive the grant funds, a resolution from the City Council is required.

BUDGET/FINANCIAL INFORMATION:

The construction cost estimate for the fish passage modifications to the Lower Caltrans Channel is \$4,200,000. The Creeks Division will be receiving \$300,000 in grant funding through the State Coastal Conservancy. The remaining amount would be funded with a combination of \$1.7 million in California Department of Fish and Wildlife grant funding, a \$775,000 grant from the Wildlife Conservation Board, Measure B matching funds, and other private and public grant sources.

SUSTAINABILITY IMPACT:

The purpose of the project is to improve steelhead trout migration in Mission Creek during and shortly after rain events when adequate natural stream flows exist. These efforts will contribute to local, regional, and federal objectives of removing migration barriers for the federally endangered steelhead trout.
